Content management system

From Wikipedia, the free encyclopedia

A **content management system (CMS)** is a computer software used to manage the creation and modification of digital content (**content management**).^{[1][2][3]} A CMS is typically used for **enterprise content management (ECM)** and **web content management (WCM)**.

ECM typically supports multiple users in a **collaborative environment**^[4] by integrating **document management**, **digital asset management**, and record retention.^[5]

Alternatively, WCM is the collaborative authoring for websites and may include text and embed graphics, photos, video, audio, maps, and program code that display content and interact with the user.^{[6][7]} ECM typically includes a WCM function. CMS is a web template to create your own website.

Melansir laman [Kinsta](#), *content management system* atau CMS adalah sebuah aplikasi yang dapat membantu pengguna untuk membuat, mengatur, dan mengubah konten di dalam *website*.

Lalu, seiring berjalannya waktu, teknologi ini sering dimanfaatkan *developer* sebagai *tool* untuk membangun situs web tanpa perlu menulis semua kode dari awal.
